Professional Summary

MERN Stack Developer with strong Node.js backend skills and hands-on experience building secure, scalable, real-time web applications. Experienced in Express.js REST APIs, JWT authentication, RBAC, Redis-backed rate limiting, Socket.io, and relational and NoSQL database design (MySQL, PostgreSQL, MongoDB). Modernized a legacy production codebase to ES6+ and delivered a zero-downtime password migration from SHA-1 to Argon2id for an international client.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
- **Frontend:** React.js, Next.js, Redux Toolkit, Tailwind CSS, Chakra UI, Vite
- **Backend & Real-Time:** Node.js, Express.js, RESTful APIs, Socket.io, WebSockets, Sequelize ORM, Multer
- **Security:** JWT, Argon2id, RBAC, Rate Limiting, API Security
- **Databases & Caching:** MongoDB, MySQL, PostgreSQL, Redis (Caching, Rate Limiting)
- **Tools:** Git, GitHub, Docker, Postman

Experience

Backend Developer (Node.js), SkyllX Technologies Pvt. Ltd. **Jun 2026 – Present**
Client: Topmai, Mexico | Node.js, Express.js, MySQL, Redis, Socket.io, Sequelize, JWT, Argon2

- Modernized a large legacy Node.js/Express codebase by refactoring procedural, callback-based code into modular ES6+ async/await with standardized error handling and REST status codes.
- Designed a zero-downtime credential migration that re-hashed legacy SHA-1 passwords to Argon2id at login, with no service disruption and no forced password resets.
- Implemented RBAC and strengthened JWT security with issuer/audience verification and Redis-backed rate limiting, while keeping older mobile app versions compatible.
- Built threaded message replies for direct and group chat using Sequelize with optimized SQL joins, encrypted payload handling, and real-time Socket.io events; worked directly with an international team to fix production issues and deliver client requirements.

Projects

Online Voting Platform **GitHub**
React.js, Node.js, Express.js, PostgreSQL, Socket.io

- Engineered a secure voting system with unique voter-ID verification and strict role separation between voters and administrators.
- Guaranteed one-person-one-vote integrity using PostgreSQL transactions, row-level locking, and unique constraints, preventing double voting and race conditions.
- Built live election dashboards with Socket.io streaming real-time vote counts, plus password recovery and token-based sessions.

Real-Time Chat Platform (WhatsApp Web Clone) **GitHub**
React 19, TypeScript, Node.js, Express 5, MongoDB, Socket.io

- Built a type-safe, full-stack messaging app with instant delivery, typing indicators, and online/offline presence using Socket.io.
- Secured authentication with Argon2 password hashing and stateless JWTs stored in HTTP-only cookies.
- Implemented file and media sharing with Multer and an optimized image-handling pipeline.

Education

MS Engineering College, Bengaluru **Dec 2022 – Jul 2026**
Bachelor of Engineering in Computer Science *CGPA: 8.12*
Chandrekant Patil PU College, Kalaburgi **2020 – 2022**
Pre-University *70%*

Certificates

Software Engineer Certificate - HackerRank
