Profile Summary

Backend-focused Full-Stack Developer with strong skills in Java, Spring Boot, and Microservices Architecture, building secure, scalable, event-driven systems. Designed a multi-channel notification system (Email, SMS, WhatsApp) from scratch using MSG91 and optimized it with Apache Kafka, and integrated Traccar for real-time GPS tracking. Hands-on with Spring Security, JWT, RBAC, Redis caching, rate limiting, pagination, and database transactions across PostgreSQL and MySQL. Strong foundation in DSA, OOP, and System Design.

Education

MS Engineering College, Bengaluru **Dec 2022 – May 2026**
Bachelor of Engineering in Computer Science *CGPA: 8.12*

Chandrekant Patil PU College, Kalaburgi **2020 – 2022**
Pre-University *70%*

Technical Skills

- **Languages:** Java, JavaScript, TypeScript, SQL
- **Backend:** Spring Boot, Spring Security, Spring Data JPA, Hibernate,REST APIs, Microservices Architecture, Node.js.
- **Security:** JWT, Authentication, Authorization, RBAC, API Security, Rate Limiting
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis (Caching, Rate Limiting), Database Transactions
- **Frontend:** React.js, Next.js
- **Core:** Data Structures & Algorithms, OOP, System Design, API Design, Database Design
- **DevOps & Tools:** Docker, Kubernetes, Git, GitHub, CI/CD, Postman

Experience

Full-Stack Developer, SkyllX Technologies Pvt. Ltd. **Jun 2026 – Present**
Java, Spring Boot, React.js, Next.js

- Designed and built a multi-channel notification system from scratch for Email, SMS, and WhatsApp using MSG91 APIs, then optimized throughput and reliability with Apache Kafka for asynchronous, event-driven processing.
- Developed scalable microservices and REST APIs using Java, Spring Boot, and Spring Data JPA with pagination, filtering, and transactional workflows on MySQL and PostgreSQL.
- Implemented secure backend services with Spring Security, JWT authentication, RBAC, and Redis-based rate limiting, and integrated Traccar for real-time GPS tracking.
- Solved real-world business problems by shipping new backend features, resolving production bugs, and optimizing SQL queries to improve API reliability; deployed with Docker and Kubernetes and managed code with Git and GitHub.

Projects

Online Voting Platform **GitHub**
React.js, Node.js, Express.js, PostgreSQL

- Engineered a secure, full-stack voting platform with role-based access control and REST APIs for voter management, election configuration, voting, and result processing.
- Enforced one-vote-per-voter integrity using PostgreSQL transactions and constraints, with secure vote storage, real-time result updates, and interactive analytics dashboards.

Certificates

Software Engineer Certificate - HackerRank
